Education

PES University (8.94/10.00)

(2023-2027)

Pursuing B.Tech in Computer Science Engineering. Awarded CNR-Rao distinction for six semesters.

Skills

Languages C, GoLang, Rust, Python

Technologies Git, Perforce, MySQL, SQLite, Docker, CI/CD

Experience

Akamai Technologies *Summer Intern*

Jun 2026 - August 2026

Joined the ghost-dev team as a summer intern. Focused on automating complex build routines for the team enabling profile graded optimisations on Akamai GHost.

PES Innovation Lab *Research Intern*

Jun 2025 - Aug 2025

Worked on introducing an operating system on the Raspberry Pi Pico micro-controller. Introduced a novel approach of loading programs dynamically at runtime.

Twospoon.ai *Project Intern*

Apr 2025

Worked on building the framework for a abstracted orchestrator service for Proxmox for controlling lifetimes of servers. Project spanned 2 weeks.

Homebrew (club)

Jun 2025 - March 2026

Core Team Lead

Overseeing functioning and contributions to the club. Coordinating events such as [Tilde](#), workshops, promoting FOSS culture and focusing on growing the community.

Mentor

Sep 2023 - May 2025

- Presented projects in talks and was part of the mentor panel for [Tilde 3.0](#)
- Part of the team to build ([event loop](#)) for handling event checkpoints

Projects

fs A toy implementation of the Hadoop File System focusing on the Namenode and Datanode implementation, as part of the Big Data course (CS343AB2) at PES University.

codd (WIP) A relational algebra evaluator written in rust. A basic toy implementation using projections.

possum A preemptive scheduled developed for the Raspberry Pi Pico micro-controllers with dynamic loading of programs at runtime.

mu-bonda Project focused on building a kernel space KV store specifically for Raspberry Pi 5.

forklift (WIP) A buffer pool manager written in rust

Quaso An implementation of the [Raft Consensus Algorithm](#). Built on top of the [tokio.rs](#) async runtime. Built as a cargo crate to provide strong consensus for serializable data-types for Rust.

Meerkat (WIP) A distributed leaderless cluster, synchronizing directories across all peers. Written in GoLang, and using gRPC for RPC calls across the cluster.

Anna A static site generator written in go. The goal was to provide a feature rich ssg while beating industry standard benchmark render times.

Contributions

bunsamosa-bot The official bot for ACM PESUECC Hacknight events

eventloop The goal of the project was to make overnight event checkpoint keeping automated. Worked on bringing up the backend and a bit of the frontend

Saturn Forked from [anirudhRowjee/saturn](#). Saturn is an in-memory timer daemon that waits for sometime and sends an HTTP request when it's done.
